

1 ABSTRACT

2 A pedicure spa chair having an entertainment center built into the pedicure spa chair
3 which comprises modification of the pedicure spa chair arm and a media holder, having a tray
4 with three upstanding sides, and a hollow arm mounted at its first end thereto, in
5 communication with a cavity formed between an upper plate and a spaced lower plate of the
6 media holder. The media holder arm is mounted at its second end to an opening in the side of
7 a pedicure chair arm, which chair arm has a main section and an arm cap. A power cord is fed
8 from a source for alternating current through an opening in the side of the pedicure chair arm
9 up the arm to a cavity of the tray for exit through an access point in one of the tray sides for a
10 connection to an entertainment device. An audio cable with a female jack mounted on the
11 surface of one edge of the arm cap, extends from the cap through an opening in the chair arm,
12 up the hollow arm of the media holder, through a cavity in the holder to an access point in the
13 side wall of the media tray.
